

DAY 3 OF 7

Create and Manage Your First Repository

A repository (or "repo") is just a project folder that Git is tracking. Knowing how to create one — and the difference between a local repo on your laptop and a remote one on GitHub.com — is the skill that turns "code on my computer" into "code the world can see."

DAY 3 OF 7

A progress bar consisting of seven rounded rectangular segments. The first three segments are highlighted with a gradient from orange to purple, while the remaining four are dark grey.

Create and Manage Your First Repository

★ WHY THIS MATTERS

A repository (or "repo") is just a project folder that Git is tracking. Knowing how to create one — and the difference between a local repo on your laptop and a remote one on GitHub.com — is the skill that turns "code on my computer" into "code the world can see."

WHAT YOU'LL DO

- Create a new repository directly on GitHub.com
- Clone it down to your computer
- Understand the difference between local and remote, and why you need both
- Practice pushing a small change up to GitHub

CLONE, THEN PUSH

```
$ git clone https://github.com/you/your-repo.git
$ cd your-repo
$ git add . && git commit -m "Add notes"
$ git push origin main # send local commits to GitHub
```

Day 3 Checkpoint

Share the link to your new repository in the Challenge Feed.

☐ MARK COMPLETE IN THE CHALLENGE FEED TO UNLOCK DAY 4
