

DAY 6 OF 7

# Collaborate Like a Real Developer

Almost no real-world code is written alone. Understanding how people propose changes to each other's projects — via forks and pull requests — is what separates "I know Git" from "I can work on a team's codebase."

DAY 6 OF 7

## Collaborate Like a Real Developer

### ★ WHY THIS MATTERS

Almost no real-world code is written alone. Understanding how people propose changes to each other's projects — via forks and pull requests — is what separates "I know Git" from "I can work on a team's codebase."

### WHAT YOU'LL DO

- Fork someone else's public repository (we'll point you to a beginner-friendly one)
- Make a small change and open your first Pull Request
- Learn what a code review comment looks like and how to respond to one

● ● ● FORK → CHANGE → PULL REQUEST

```
# after clicking "Fork" on github.com, then locally:
$ git clone https://github.com/you/their-repo.git
$ git checkout -b fix-readme-typo
$ git commit -am "Fix typo in README"
$ git push origin fix-readme-typo # then open a PR on GitHub
```

### ✓ Day 6 Checkpoint

Share the link to your first-ever Pull Request.

☐ MARK COMPLETE IN THE CHALLENGE FEED TO UNLOCK DAY 7

 **Unlocked today** · the curated "Good First Issue" list of beginner-friendly repos.
