

DAY 4 OF 7

Add a Real Project to GitHub

An empty repository doesn't impress anyone. Today's the day theory becomes a portfolio — you'll take something you've actually built (even something small) and get it properly onto GitHub, with the basic polish (a README, a clear commit history) that makes it look intentional rather than dumped there.

DAY 4 OF 7 

Add a Real Project to GitHub

★ WHY THIS MATTERS

An empty repository doesn't impress anyone. Today's the day theory becomes a portfolio — you'll take something you've actually built (even something small) and get it properly onto GitHub, with the basic polish (a README, a clear commit history) that makes it look intentional rather than dumped there.

WHAT YOU'LL DO

- Take an existing project (or a simple one you build today) and add it to Git
- Write a basic README explaining what the project does
- Commit and push it with a clear, descriptive commit message

SHIP THE PROJECT

```
$ git add .  
$ git commit -m "Add project: what it does in one line"  
$ git push origin main
```

Day 4 Checkpoint

Drop your project's GitHub link — bonus points if your README is genuinely useful.

☐ MARK COMPLETE IN THE CHALLENGE FEED TO UNLOCK DAY 5

Unlocked today · copy-paste Commit Message & README templates.
