

DAY 1 OF 7

Get Your Developer Home Base Set Up

Every developer's work — from beginner side projects to production code at big tech companies — lives on GitHub. Before you can learn a single Git command, you need the account and tools in place. Skip this step and every day after it gets harder, so today is 100% setup, zero shortcuts.

DAY 1 OF 7

A progress indicator consisting of seven small, rounded rectangular blocks. The first block is filled with the orange-to-purple gradient, while the remaining six blocks are dark gray.

Get Your Developer Home Base Set Up

★ WHY THIS MATTERS

Every developer's work — from beginner side projects to production code at big tech companies — lives on GitHub. Before you can learn a single Git command, you need the account and tools in place. Skip this step and every day after it gets harder, so today is 100% setup, zero shortcuts.

WHAT YOU'LL DO

- Create your GitHub account (and pick a professional-looking username — recruiters see this)
- Install Git on your computer
- Install a code editor (VS Code) if you don't already have one
- Connect Git to your GitHub account so your computer and GitHub can "talk" to each other

CONNECT GIT TO YOUR ACCOUNT

```
# tell Git who you are - use the same name & email as your GitHub account
$ git config --global user.name "Your Name"
$ git config --global user.email "you@example.com"
$ git --version # confirm the install worked
```

Day 1 Checkpoint

Post a screenshot of your new GitHub profile page in the Challenge Feed.

☐ MARK COMPLETE IN THE CHALLENGE FEED TO UNLOCK DAY 2
